

ABSTRACT

A housing for a light fixture comprising a body having a sidewall with a plurality of fin-engaging elements and at least one fin removably engaged with at least one of the fin-engaging elements, thereby providing great design adaptability at
5 modest cost. Preferably, one fin differs from another fin in character such as in shape, color, material or indicia displayed on the surface of the fin. A method is also provided for fabricating a light fixture with selective and exchangeable fins whereby selected placement of the fins around the sidewall is possible.
